As madeiras são uma matéria natural viva que está sujeita a deformações por ser um material higroscópico (material que absorve e/ou perde água dependendo do meio ambiente onde se encontra). A cor/coloração dos artigos de madeira depende de diversos fatores tais como a tonalidade da madeira pelo que poderá divergir da amostra de cor assim como de artigo para artigo. Estas diferenças devem ser encaradas como uma característica da matéria-prima e não como um defeito.

La madera es un material natural vivo sujeto a deformaciones por ser un material higroscópico (material que absorbe y/o pierde agua en función de su entorno). El color/la coloración de los artículos de madera depende de varios factores, como la tonalidad de la madera, por lo que puede diferir de una muestra de color a otra, así como de un artículo a otro. Estas diferencias deben considerarse una característica de la materia prima y no un defecto.

Le bois est un matériau naturel vivant qui est sujet à des déformations car c'est un matériel hygrosopique (matériel qui absorbe et/ou perd de l'eau en fonction de son environnement). La couleur/coloration des articles en bois dépend de plusieurs facteurs tels que la nuance du bois et peut donc différer d'un échantillon de couleur à l'autre ainsi que d'un article à l'autre. Ces différences doivent être considérées comme une caractéristique de la matière première et non comme un défaut.

Wood is a living natural material that is subject to deformation because it is a hygroscopic material (material that absorbs and/or loses water depending on its environment). The colour/colouring of wooden articles depends on several factors such as the shade of the wood and may therefore differ from one colour sample to another as well as from one article to another. These differences should be seen as a characteristic of the raw material and not as a defect.

Holz ist ein lebendiges Naturmaterial, das sich verformen kann, da es ein hygroskopisches Material ist (Material, das je nach Umgebung Wasser aufnimmt und/oder verliert). Die Farbe / Färbung von Holzartikeln hängt von verschiedenen Faktoren ab, wie z. B. dem Farbton des Holzes, und kann daher von einem Farbmuster zum anderen sowie von einem Artikel zum anderen abweichen. Diese Unterschiede sollten als eine Eigenschaft des Rohmaterials und nicht als Mangel angesehen werden.
